

VDI Solutions Built for the Healthcare Industry

The healthcare industry faces a range of unique challenges that require specific attention. Several driving factors such as compliance, PHI, third-party contractors, telehealth and other mobile healthcare options require organizations to analyze their technology infrastructure to effectively meet these challenges and concerns.

Lume's Workspace Anyware™ VDI solutions can help healthcare organizations and their associates work securely and efficiently within a compliant virtual desktop environment. Our VDI solutions are designed to support remote and mobile workers, as well as third-party contractors, allowing all users to access a secure, compliant, and fast virtual desktop experience from any location on any device.

HIPAA and HITECH Compliant

Lume offers VDI solutions that are HIPAA and HITECH compliant-ready. These Workspace Anyware™ VDI solutions allows healthcare professionals to leverage all the benefits of a VDI solution while meeting and maintaining all relevant compliance requirements. Lume will provide a Business Associate Agreement (BAA) to ensure our solutions meets HIPAA requirements.

Mobile and Remote Workers

Our VDI solutions allow healthcare organizations to support mobile, remote, and work from home employees and contractors with Bring Your Own Device (BYOD) flexibility, while still providing security, control, high-performance, and access to any and all critical applications and data.

Enterprise-Grade End Point Security

No matter what hardware or device the employees are using, data is never stored on any local device. This protects PHI if a device is stolen or lost, as tablets and other mobile devices are being used more and more within the healthcare industry. Lume provides additional endpoint security through a range of enterprise-grade endpoint solutions. These provide protection against viruses, malware, and other common threats. Monitoring, backups, and support solutions add additional protection and peace of mind for your users and devices.

KEY BENEFITS

Mobile and Remote Workers

Healthcare organizations can empower and support their mobile, remote, and work from home employees with Lume's Workspace Anyware™ VDI solutions, while providing security, control, and access to all critical applications and data

HIPAA and HITECH Compliance

Deploy HIPAA and HITECH compliant-ready VDI solutions for all users and third-party contractors in your healthcare organization

Endpoint Security and Controls

Over one hundred end-user controls to limit what healthcare employees see and the actions that can be taken

PCI DSS Compliance

Lume provides PCI DSS compliant solution for healthcare organizations that process payment card data

Business Continuity

Guarantee employees can always access mission-critical applications and data in the event of a disaster

Performance

Lume's Workspace Anyware™ VDI solutions are built for security, compliance, and performance that provide an unparalleled experience for end-users

VDI for the Healthcare Industry

HEALTHCARE CHALLENGES	FEATURE	BENEFIT
PHI Security	Restrict options for control functions like printing, external saving, copy/paste, etc. All data is stored in your secure cloud, rather than on the local device.	Proactively guard PHI being mishandled and store all data in secure cloud, rather than local device
Remote and mobile workforce	Secure, high-performance desktop environments available from any location	Provide mobility to employees and support them remotely by reducing log in times in each location and securely leverage mobile devices
HIPAA compliant devices and VDI environments	HIPAA and HITECH compliant-ready solutions with secure endpoint tools	Employees and contractors always working in a secure environment when handling PHI
PCI compliance for payments	Lume provides PCI compliant solutions	Meet PCI DSS compliance requirements for any PCI audit
Employees and third-party contractors onboarding for processing, data entry, transcribing, etc.	Healthcare specific golden Images, or machine templates, for VDI	Quickly scale by deploying the proper desktop configuration, consistently and repeatedly
Operating with compliant business partners	Lume can provide a signed HIPAA compliant BAA	Confidence that Lume meets all HIPAA requirements as a business associate
Legacy applications for certain business operations	Virtualized delivery of applications	Provide employees access to any necessary legacy apps on any device or OS version
